

Tiffanie Rothwell - 00:00

What I want to do with you today is show you everything that he sent me and kind of like prep a bit for that meeting in terms of maybe the technical side of it. Cause I know you understand it so well. And I created a bit of a.

Tiffanie Rothwell - 00:13

Report for us to look through today.

Tiffanie Rothwell - 00:15

And I'll basically, Whatever you tell me is how I'll show up tomorrow and how I'll talk to Andre about all of this.

Tiffanie Rothwell - 00:25

So I'll just share my screen with you.

Teemu Lahdenpera - 00:28

All right, sounds good.

Tiffanie Rothwell - 00:30

Yeah. Mike wants to also know, like, this is kind of like the. The goal of today is either to.

Tiffanie Rothwell - 00:35

Is two things.

Tiffanie Rothwell - 00:36

One, to prep me for the meeting tomorrow so that we try and get a yes from him. And number two is, in case he says no for whatever reason, I would love to know how hard it would be, considering what he's given us over the weekend, how hard it would be for us to do it on our own. So, again, if you tell me it's possible, but it'll take X amount of time, no problem. And if you say, look, it's not possible, we need him, then it is what it is. The first thing he sent us was the Little Tree schema. So Little Tree is our server, is our company, and the server name. And it has basically all 34 tables, column types, indexes, foreign keys, the structure. This is Claude that says this, by the way. It's not me.

Tiffanie Rothwell - 01:25

So it says that it's everything that we need to create it on the cloud. He also gave us the row counts, so I think there's 400,000 rows instead of, like, I think before we thought it was significantly more. He also gave us some business analytics, so the KPI, so the sales, the payments, taxes, inventory, loyalty, all the SQL logic. And then the last thing he gave us was he set us up with an email service. Brevo, I think it is.

Tiffanie Rothwell - 02:04

Do you know Brevo?

Teemu Lahdenpera - 02:07

Not familiar with that one.

Tiffanie Rothwell - 02:09

Me neither. But essentially he basically gave us the infrastructure for that. And now the email part through the server is apparently good.

Tiffanie Rothwell - 02:20

So.

Tiffanie Rothwell - 02:20

So this is a little bit more of the details of that. So, yeah, we. I had. Originally, Claude had thought it was like 13 million rows. I'm not even sure why, but there's actually 400,000 rows. Let me know, by the way, if there's anything on here that you want me to pause for or if I should keep going.

Teemu Lahdenpera - 02:40

Sure, I'll let you know. But I guess a quick question is that, did Andre mention the server? Like, where is it actually hosted on, like, hosting service?

Tiffanie Rothwell - 02:49

Yeah, it's with, it's a company called, I forget what the name is, but it's self hosted and it's on location. And the reason that he wanted it that way, from what he's told us, is that he doesn't like a third party hosting. And, and you know, you kind of. Last time we met, you told me, look, there are millions of companies that use Supabase on the cloud. It's very safe, it's very secure. And I had a meeting with the owner of the company yesterday and he said like, cool, you know, so from his end, we're okay. So apparently because of what he sent us, the cloud migration might be a bit easier. Is that, do you think that as well? Okay, good. You're not interested.

Tiffanie Rothwell - 03:40

Good.

Teemu Lahdenpera - 03:40

Yeah, with the cloud it's just super easy to do all of these tasks because you don't need to have any access really. Like you can just go to the cloud yourself and set up an account in a minute and then do everything yourself.

Tiffanie Rothwell - 03:52

And we could have our entire, like all of Supabase. Everything that I need to pull the data.

Tiffanie Rothwell - 03:58

It.

Tiffanie Rothwell - 03:59

I can do this then.

Tiffanie Rothwell - 04:00

Without Andre?

Teemu Lahdenpera - 04:02

Yeah, like, as long as you have the data somewhere accessible, then you can have all the data in the cloud too, very quickly.

Tiffanie Rothwell - 04:09

And what would I need to have the data accessible?

Teemu Lahdenpera - 04:15

It could be anywhere, but There was these 400,000 rows and do you have access to those rows already? Like, do you have some kind of database you can communicate with or some export of that data.

Tiffanie Rothwell - 04:28

Where.

Tiffanie Rothwell - 04:29

So let's say this was the. You're talking about this specifically, right?

Teemu Lahdenpera - 04:37

Well, the schema is a lot easier because, like we can just copy that directly. But then how about all the data that's inside of the database, like these 400,000 rows?

Tiffanie Rothwell - 04:46

So if I, if he gave me passwords to things. You know what, let me put that in Claude.

Tiffanie Rothwell - 04:51

Do I have access? What was your question?

Tiffanie Rothwell - 04:54

Do I have access to the database?

Tiffanie Rothwell - 04:57

Is that what he said?

Teemu Lahdenpera - 04:58

To the data of 400,000 rows? So I think we already have the schema because even I saw that schema last time

were on the call.

Tiffanie Rothwell - 05:10

Yeah, yeah, we have that. Let me share my Claude, because I.

Tiffanie Rothwell - 05:15

Think that would be.

Tiffanie Rothwell - 05:19

I think we have everything built in here, so. And all the projects for files are taking it from this project. So I'll go ahead and ask it and whatever you think I'm missing, I'll write it down and I'll make sure to get that from Andre tomorrow in A meeting. It's so funny. We're having like a big lunch meeting for him and we're gonna have a lot of wine and a lot of appetizers and a lot of food. So we're hoping he's very nice tomorrow. Okay, so it says you don't have the actual data. I just have the containers, but not what's in them.

Teemu Lahdenpera - 06:06

Okay, so it seems like you don't have the data yet and you also don't have access to that database yet. It's saying that you don't have the SSH access.

Tiffanie Rothwell - 06:20

No, that I still don't have. Is that what I need, SSH access?

Teemu Lahdenpera - 06:25

If you wanted to get the data out yourself, then yes. But you can also ask Andre for the export.

Tiffanie Rothwell - 06:41

Okay, interesting. So I really thought he would have.

Tiffanie Rothwell - 06:44

Sent that to me. So then number one, let me start.

Tiffanie Rothwell - 06:46

A little bit of a note taker.

Tiffanie Rothwell - 06:52

I'll put it.

Tiffanie Rothwell - 06:56

It's.

Tiffanie Rothwell - 06:57

It's hard when I. I feel like there's so much that I don't know and I feel like Andre knows so much more that sometimes when I ask him for something he kind of, you know, it's not. It's not the easiest. So I'll start taking some notes on.

Tiffanie Rothwell - 07:14

What you think I need to ask him for tomorrow and what we need.

Tiffanie Rothwell - 07:19

And if you can walk me through again, kind of like the steps,.

Tiffanie Rothwell - 07:26

You just move you.

Tiffanie Rothwell - 07:27

Okay, so I need the ssh.

Teemu Lahdenpera - 07:31

Yeah, yeah. And that's with the assumption that you will be using the Supabase that's self hosted and that you need to get the data out of it yourself. The alternative is for Andre to just send the data dump so like all of the data directly to you and then you can import the data yourself into Supabase cloud.

Tiffanie Rothwell - 07:51

But the thing is the data, like it's a. It's retail.

Tiffanie Rothwell - 07:55

Right?

Tiffanie Rothwell - 07:55

So change it. Doesn't it change every single day? Wouldn't I want like the live data? Does that, does that even make sense?

Teemu Lahdenpera - 08:07

Yeah, but I guess like if the live database has all the historical data too, then yeah, you could just connect to that directly.

Tiffanie Rothwell - 08:16

What do you mean?

Teemu Lahdenpera - 08:19

Like if it's retail data and it's updating every single day?

Tiffanie Rothwell - 08:22

Yes.

Teemu Lahdenpera - 08:22

The system that you have, like, I guess it also has all the historical data too.

Tiffanie Rothwell - 08:29

It does.

Teemu Lahdenpera - 08:30

Okay. And was that also self hosted fully?

Tiffanie Rothwell - 08:35

Yeah, same thing.

Teemu Lahdenpera - 08:39

Well, in that case you definitely need to have that access to that server if you want to pull data from it all the time.

Tiffanie Rothwell - 08:45

Exactly, exactly.

Tiffanie Rothwell - 08:47

So I guess then knowing that, what do I need for.

Teemu Lahdenpera - 08:54

Well, for sure. Like the SSH access so you can actually interact with the server.

Tiffanie Rothwell - 09:00

Interact with the server? Yeah.

Tiffanie Rothwell - 09:05

Okay, great. Is there anything else that I need or.

Tiffanie Rothwell - 09:10

That would be it.

Teemu Lahdenpera - 09:13

Well, that would be it, really, because then you have access to everything if you have that.

Tiffanie Rothwell - 09:23

And just like, in terms of communication with a developer, for me to get the most for that text message, what would you. How would you say it? What would you say?

Tiffanie Rothwell - 09:36

Let's say. No, this is a very basic question,.

Tiffanie Rothwell - 09:39

But let's say I. I'm texting him saying, hi, Andre, you know, do I just say, can you send me SSH access so that I can interact with the server? Is that.

Teemu Lahdenpera - 09:50

Yeah, I mean, what I would say is to Claude, like, write me a message for Andre to get that access because it's going to then also use the contacts that you've given it previously.

Tiffanie Rothwell - 10:00

I think it's too big of a project now. Like, I think it's gonna.

Tiffanie Rothwell - 10:05

Might be too confusing.

Tiffanie Rothwell - 10:13

If I sent him a message saying, can you send me the S. Oops, I spelled that wrong. The SSH access so that I can interact with the server, will he understand what to do or is there any lack of clarity yet?

Tiffanie Rothwell - 10:25

Cl. Clear.

Teemu Lahdenpera - 10:26

He should. He should. Yeah.

Tiffanie Rothwell - 10:32

Oh, it says he already sent it to me. Oh, great.

Teemu Lahdenpera - 10:37

But I think last time we tried it wasn't working. Yeah.

Tiffanie Rothwell - 10:42

Could we try it again together, so.

Teemu Lahdenpera - 10:45

Oh, yeah. And we also had this issue with the access. Like, he had some firewall there that was, like, blocking the connection.

Tiffanie Rothwell - 10:52

Is that what it was? Okay, so let's try this again, just so that I'm super clear tomorrow on what the problems are. So what would be the command or the prompt for us to try this again?

Teemu Lahdenpera - 11:06

You can just ask Claude to connect again or try to connect again to the server.

Tiffanie Rothwell - 11:16

Perfect.

Tiffanie Rothwell - 11:16

That was easy.

Tiffanie Rothwell - 11:18

You're so good at this.

Tiffanie Rothwell - 11:19

This really seems like a different language for me. I'm sorry for being so slow with all of this.

Teemu Lahdenpera - 11:26

No worries. But even for, like a developer, it's still a bit hard to understand this because there's so much on his side he has set up and we don't really have the visibility into that system at all. So it's just kind of making guesses.

Tiffanie Rothwell - 11:37

Yeah, yeah, yep.

Tiffanie Rothwell - 11:39

I. I really get that. So I guess now we're going to see what it says and then if we get this is what we hit last time, right?

Teemu Lahdenpera - 11:48

Yeah.

Tiffanie Rothwell - 11:50

Got it.

Teemu Lahdenpera - 11:52

And after it's done this test, if it still can't access it, then you can just ask it to write this message. Again, so it's going to be even more specific.

Tiffanie Rothwell - 12:00

Got it.

Tiffanie Rothwell - 12:01

That makes so much sense.

Teemu Lahdenpera - 12:12

And with Supabase Cloud, do you make an account yet?

Tiffanie Rothwell - 12:17

I didn't, but if you say that should be my next step, I'll do that.

Teemu Lahdenpera - 12:21

Yeah. I mean, in any case, like you'll have to use a similar setup even for the self hosted one, so you might as well set it up now on the cloud yourself just to try it out. And that lesson will carry over even if you're using the self hosted one. So you might as well also do that.

Tiffanie Rothwell - 12:41

Can I always allow this?

Tiffanie Rothwell - 12:43

Is that okay?

Teemu Lahdenpera - 12:45

I would allow once for these kind of commands that are interfacing with the server because they're riskier.

Tiffanie Rothwell - 12:50

Got it. Okay,.

Tiffanie Rothwell - 12:53

So to create the Supabase cloud, again, this is a super basic question, but is there a certain email address, like it should be. Should it be the owner of the company's email address that I set it up with? Can it be my own? Can it be moved one day? Like, how important is this setup in terms of flexibility of who owns?

Teemu Lahdenpera - 13:12

Doesn't really matter because you can invite team members, so you can just add them later and then give them owner.

Tiffanie Rothwell - 13:17

Okay, great.

Tiffanie Rothwell - 13:18

So I can do it on my own then.

Teemu Lahdenpera - 13:20

Yeah.

Tiffanie Rothwell - 13:27

Oh, cool.

Tiffanie Rothwell - 13:28

It actually like you said, it wrote the message if ever it doesn't work again.

Tiffanie Rothwell - 13:32

Interesting.

Teemu Lahdenpera - 13:35

Yeah.

Tiffanie Rothwell - 13:40

What does this mean? Team U DNS resolves fine to 70 though.

Tiffanie Rothwell - 13:45

What does that even mean?

Teemu Lahdenpera - 13:49

It means that like it's connecting to the server or like it's recognizing it, but it's just not okay listening.

Tiffanie Rothwell - 13:57

It's.

Tiffanie Rothwell - 14:02

And you were saying like once we have Suedbase on the cloud, this whole process doesn't take this much time. Right? It's like a lot faster.

Teemu Lahdenpera - 14:12

Yeah, it's 100 times faster to do.

Tiffanie Rothwell - 14:15

Things a hundred times.

Tiffanie Rothwell - 14:16

Wow, that's huge. Cool.

Teemu Lahdenpera - 14:18

Well, it's obviously like an exaggeration, but yeah, like it's so much smoother because you have all access to the same thing on the cloud and it's also easy to collaborate on things. Okay.

Tiffanie Rothwell - 14:34

This is actually a much more useful result than last time.

Tiffanie Rothwell - 14:37

The diagnosis is conclusive. The server is up.

Tiffanie Rothwell - 14:42

The network path works. Idra's firewall is dropping.

Tiffanie Rothwell - 14:46

You specifically. Every port I tested timed out the.

Tiffanie Rothwell - 14:49

Same way and they all die at the same hop, which is the signature of a FireWall Blocking your IP, not the server being down.

Tiffanie Rothwell - 14:55

Okay, Cool.

Tiffanie Rothwell - 15:01

My current IP address, could you add it to your allow list? And that's. That's it. That's the only thing that was Missing?

Teemu Lahdenpera - 15:13

I guess so. Yeah.

Tiffanie Rothwell - 15:17

Okay, let me write this right away.

Tiffanie Rothwell - 15:20

To him while I have you.

Tiffanie Rothwell - 15:21

He's usually super fast too.

Teemu Lahdenpera - 15:24

Yeah. But I would still add a mention saying that this was what Claude was suggesting to me because it might not be like 100% accurate still, because we didn't actually see it run these commands, we just kind of saw that it gave this outcome for us. But I would still preface it by saying it's from Claude.

Tiffanie Rothwell - 15:44

Perfect.

Tiffanie Rothwell - 15:44

I just wrote from Claude.

Tiffanie Rothwell - 15:47

Okay, so then, depending on what he writes back, what's my next step?

Teemu Lahdenpera - 15:59

I guess it's just wait for that response. But in the meantime, you could set up the Supabase cloud and then get familiar with that set of things.

Tiffanie Rothwell - 16:09

Supabase. I'm going to share my screen with you.

Teemu Lahdenpera - 16:17

Because. Yeah. Then with Zuip based cloud, it's also easy to connect the MCP and then you can do everything through your cloud code.

Tiffanie Rothwell - 16:25

So what do I do when I'm here? I just create an account you can.

Teemu Lahdenpera - 16:30

Do like start your project.

Tiffanie Rothwell - 16:33

Perfect.

Teemu Lahdenpera - 16:35

And then I would recommend GitHub.

Tiffanie Rothwell - 16:37

Perfect.

Tiffanie Rothwell - 16:38

Okay. My GitHub's already synced, so that's great.

Tiffanie Rothwell - 16:41

Authorized Supabase, right? Good.

Teemu Lahdenpera - 16:43

Yep.

Tiffanie Rothwell - 17:00

Can I just name it like this? All good here.

Teemu Lahdenpera - 17:04

Should I change the name later?

Tiffanie Rothwell - 17:06

Should I name it like Lips, Little tree?

Tiffanie Rothwell - 17:09

Oops. Something like that?

Teemu Lahdenpera - 17:14

Change it later. But yeah, doesn't matter for now.

Tiffanie Rothwell - 17:18

Perfect.

Tiffanie Rothwell - 17:27

Do you want me to connect GitHub?

Teemu Lahdenpera - 17:32

You don't necessarily need to do it yet.

Tiffanie Rothwell - 17:34

Perfect.

Tiffanie Rothwell - 17:35

Anything else you'd want me to change?

Teemu Lahdenpera - 17:38

Yeah, just the database password. You need to put one.

Tiffanie Rothwell - 17:42

That's not good enough.

Tiffanie Rothwell - 17:44

Why?

Teemu Lahdenpera - 17:46

It might be.

Tiffanie Rothwell - 17:50

You need a stronger.

Tiffanie Rothwell - 17:53

I'm just gonna. Is it okay if I just. I'll just copy that and put it.

Tiffanie Rothwell - 18:00

Into a message for myself. Nope, that didn't work.

Teemu Lahdenpera - 18:06

It's not a big deal because you can just treat this as a development version and then you can always make the production one later, which is a lot more secure.

Tiffanie Rothwell - 18:13

Okay, perfect.

Tiffanie Rothwell - 18:14

So then I would.

Teemu Lahdenpera - 18:15

Just one more thing.

Tiffanie Rothwell - 18:16

Yep.

Teemu Lahdenpera - 18:17

To enable automatic rls. It just means that the tables will be a lot more secure and people can't access them that easily. So you have there. So it's a lot more secure.

Tiffanie Rothwell - 18:28

Amazing. And then just create new project.

Teemu Lahdenpera - 18:31

Yep.

Tiffanie Rothwell - 18:31

Cool. Save.

Teemu Lahdenpera - 18:42

And now it's going to take a minute or two, but while we wait for that, we can start connecting the super base mcp.

Tiffanie Rothwell - 18:48

Sure.

Teemu Lahdenpera - 18:50

I can give you the command for it. Just give me a second.

Tiffanie Rothwell - 18:52

Oh, thank you so much.

Teemu Lahdenpera - 18:59

So if you give Claude this command here, it Will connect.

Tiffanie Rothwell - 19:04

You're amazing, Claude.

Tiffanie Rothwell - 19:07

So I just straight up just drop that in?

Teemu Lahdenpera - 19:11

Yeah, you can just copy the message and then drop it to Claude.

Tiffanie Rothwell - 19:14

Cool. I did that.

Tiffanie Rothwell - 19:18

It says it's running. I'll press allow once.

Teemu Lahdenpera - 19:22

Yeah. And could you change your screen so I can see?

Tiffanie Rothwell - 19:25

Oh, yeah. Yep, yep.

Teemu Lahdenpera - 19:27

Thanks.

Tiffanie Rothwell - 19:28

I think I might just do my entire screen so that way you can see everything. I'll just close this.

Teemu Lahdenpera - 19:43

All right. It says that it's added.

Tiffanie Rothwell - 19:49

Okay, cool. So,.

Teemu Lahdenpera - 19:54

Okay, you have to restart the cloud code now.

Tiffanie Rothwell - 19:59

Oops. Let me slide this.

Tiffanie Rothwell - 20:03

Can I just quit it?

Teemu Lahdenpera - 20:05

Yeah, you can just quit it and then reopen.

Tiffanie Rothwell - 20:07

Perfect.

Teemu Lahdenpera - 20:17

And then you can do slash and then mcp.

Tiffanie Rothwell - 20:23

Yeah, yeah.

Teemu Lahdenpera - 20:24

Enter and then select the Supabase one. Oh, enter again.

Tiffanie Rothwell - 20:34

Oh, yeah, I remember you did this with me last time. Subways.

Teemu Lahdenpera - 20:37

This one. Now it's gonna. Yep. So if you go back for a head connect. Yeah,.

Tiffanie Rothwell - 20:49

Grant access.

Teemu Lahdenpera - 20:51

Now we should actually connect the app because it recognizes the project. Yeah, this was the one that we just made.

Tiffanie Rothwell - 20:56

Cool.

Tiffanie Rothwell - 21:14

Do I open Claude?

Teemu Lahdenpera - 21:18

You can. You're gonna hit open Claude. It should just pop up to the same window.

Tiffanie Rothwell - 21:24

I think maybe relaunch this. T.

Teemu Lahdenpera - 21:30

That's for the tab itself.

Tiffanie Rothwell - 21:32

Okay.

Teemu Lahdenpera - 21:33

Is it opening in like a new tab for Claude?

Tiffanie Rothwell - 21:36

No, nothing is opening. This is like my full screen that you're seeing. Okay, so click out of this.

Teemu Lahdenpera - 21:48

And then if you do slash MCP again, you can check if it's connect.

Tiffanie Rothwell - 22:02

Oh, that's weird because it says connected. Should I refresh this?

Teemu Lahdenpera - 22:11

What if you just close this tab here? This cloud tab?

Tiffanie Rothwell - 22:15

Yep.

Teemu Lahdenpera - 22:18

And then what if you just restart Claude code again?

Tiffanie Rothwell - 22:22

Yeah, yeah, I hear you.

Teemu Lahdenpera - 22:49

Okay.

Tiffanie Rothwell - 22:50

Yay. Amazing.

Tiffanie Rothwell - 22:53

Oh, so cool.

Tiffanie Rothwell - 22:54

Okay, awesome. So, yeah.

Tiffanie Rothwell - 22:56

What comes now?

Teemu Lahdenpera - 22:58

Yeah, now we can tell Claude code to create the tables in Supabase using the MCP and the schemas provided by Andre.

 Tiffanie Rothwell - 23:18

Amazing.

 Tiffanie Rothwell - 23:18

I can just press go.

 Tiffanie Rothwell - 23:21

Cool.

 Teemu Lahdenpera - 23:23

And now it will create table structures, but it won't populate the data because we don't have that data yet. But at least we can start building even the interface already, because we'll have the exact schema that we need to use for the interface and the database.

 Tiffanie Rothwell - 23:37

Amazing.

 Tiffanie Rothwell - 23:39

And remind me, what does that. That basically will give me access to all of the data.

Tiffanie Rothwell - 23:48

Allow Claude to use list projects.

Tiffanie Rothwell - 23:51

Allow once.

Teemu Lahdenpera - 23:51

Yep.

Tiffanie Rothwell - 23:52

Right.

Teemu Lahdenpera - 23:52

Yeah. So it's going to allow it to look at your super based projects that you have on your account.

Tiffanie Rothwell - 23:58

Right.

Tiffanie Rothwell - 24:03

Allow once again.

Tiffanie Rothwell - 24:05

Yeah, Yep.

Teemu Lahdenpera - 24:06

So it's going to show the tables that you have. So the Databases. And then while it's doing that you can check out Supabase. So if you close this pop up here or at least move it a bit and then on the sidebar in Supabase.

Tiffanie Rothwell - 24:28

Sidebar and Supabase like these.

Teemu Lahdenpera - 24:32

Yeah. Table editor, table editor. Yeah. And then once it's run the command, so when I can accept those commands, once it's run those, it's going to show up here. So you can see then the table structures and what kind of data will be added to them later.

Tiffanie Rothwell - 24:54

And that data will now be on the cloud from what I understand.

Teemu Lahdenpera - 24:58

Or it will be on the cloud, but for now it's just going to be the schemas because. Because we don't have the actual data.

Tiffanie Rothwell - 25:05

Data because we're still missing what I.

Tiffanie Rothwell - 25:07

Sent Andre the text message for.

Tiffanie Rothwell - 25:11

Yeah, allow once for this too.

Teemu Lahdenpera - 25:15

Yeah. And then what we can do after we have the tables is to build the interface and then even if you end up going with the self hosted subabase, still we already have the interface built and all the schemas in subabase so it's going to be an easy swap over to either the cloud or then the self hosted one. So we're not really locking ourselves in to using the cloud, we're just using it to speed up the development process. And for the interface for the dashboard, do you already have some kind of direction for that? Have you built some version of it?

Tiffanie Rothwell - 26:12

What do you mean?

Teemu Lahdenpera - 26:14

Because like the goal is to build this dashboard, right?

Tiffanie Rothwell - 26:17

Oh yeah, I've built all of it. The front end part of it is all fully built. It's the back end and the connections and making

the actual data be what it's supposed to be. But I, I'd love to show you that if.

Tiffanie Rothwell - 26:30

Okay, let's see if I can go.

Tiffanie Rothwell - 26:33

What would we, what did we call it? I think I put it on.

Tiffanie Rothwell - 26:47

Well I'll just show you a very simple one because we're building the.

Tiffanie Rothwell - 26:53

So when Mike opens up his dashboard I want him to have everything, you know, every business that he has its own dashboard, has its own information.

Tiffanie Rothwell - 27:06

Oops, Let me just allow. Just continue growing like it will give.

Tiffanie Rothwell - 27:14

Him his meeting prep in advance. It has like wrap ups of what we're working on, an idea capture. It has his assistant's entire workflow and her to do's events and then in his personal one it has like messages to him on from Telegram, I have a big one and his assistant has one as well. So front wise it's built, it's just the actual like, I think what I really want to be able to do next is send that telegram message with like here's your calendar events today, here's your meeting prep for the day. Here's, you know, that's my next kind of like milestone.

Teemu Lahdenpera - 28:10

Okay, and for that, do you have the automation built yet or have you started working on it?

Tiffanie Rothwell - 28:16

I have the framework and I'll show that to you. I have like the this, that, this, that, but I haven't actually done it yet. But for every single step, have it all drawn out and how to do it and what to do and.

Tiffanie Rothwell - 28:30

But yeah, not.

Tiffanie Rothwell - 28:33

I wish I could just ask it to give me the preview right now because it's still self in my. I have to move it to an actual site. Is that important by the way? Like this one has its own site, the LTV dashboard. The other one is just in my computer. Is that a bad thing.

Teemu Lahdenpera - 28:55

For development? That's fine, but then if other people need to access it, then yeah, it's better to post it somewhere. But is it hosted on like in top pages or is it on like.

Tiffanie Rothwell - 29:05

I think it might be actually, I.

Tiffanie Rothwell - 29:07

Think I just did that. So how do I make this, how do I go see what this looks like visually?

Teemu Lahdenpera - 29:16

You'd have to have the URL of the site.

Tiffanie Rothwell - 29:19

Yeah, I don't think I've built a.

Tiffanie Rothwell - 29:21

URL for the site yet.

Tiffanie Rothwell - 29:22

I'm pretty sure.

Teemu Lahdenpera - 29:23

Okay.

Tiffanie Rothwell - 29:24

I would that in the setting, right?

Teemu Lahdenpera - 29:28

Yeah, I think like one of the things that you showed me was hosted on GitHub. Right? Like it was a GitHub domain.

Tiffanie Rothwell - 29:36

It was the self hosted like the local host one.

Teemu Lahdenpera - 29:40

Okay.

Tiffanie Rothwell - 29:43

Could read or modify pos row once it's loaded.

Tiffanie Rothwell - 29:46

What does that mean?

Teemu Lahdenpera - 29:51

Wait, which part?

Tiffanie Rothwell - 29:53

This one here?

Teemu Lahdenpera - 29:55

Yeah. It means that the Supabase that he had didn't have the security enabled because it wasn't on the cloud,

which is fine. But with the cloud superb base, it's accessible online. So you need to have the security protocol set up so that nobody can access it besides the authorized users.

Tiffanie Rothwell - 30:18

I'm going to wait for it to preview.

Tiffanie Rothwell - 30:21

So it's saying that the Telegram bot work doesn't depend on this. You're unblocked either way.

Tiffanie Rothwell - 30:29

I don't even know what we use, but I'll show you.

Teemu Lahdenpera - 30:33

What?

Tiffanie Rothwell - 30:37

What were you saying? There we go.

Teemu Lahdenpera - 30:41

I was just going to say that for like the question it's asking us, I would do option A.

Tiffanie Rothwell - 30:47

Option A. Okay. Skip intro.

Tiffanie Rothwell - 30:53

So this is my next step. If I go to my project, this is where I want to be at.

Teemu Lahdenpera - 31:06

Okay, yeah, let me just quickly read it.

Tiffanie Rothwell - 31:11

Sure.

Teemu Lahdenpera - 31:20

Okay. It's the same way I've set up my bot.

Tiffanie Rothwell - 31:23

Really? Oh my God. Thank God. Okay, great.

Tiffanie Rothwell - 31:27

Yeah.

Teemu Lahdenpera - 31:28

The only real difference is like here it's deploying to Andre server. For me, I've deployed it to Railway because deploying to Railway is like super simple. Like all you need to do is have the code in GitHub and then just press a button and it's going to deploy. But yeah, otherwise it's the same whatever.

Tiffanie Rothwell - 31:45

You tell me to do. I just. The only thing is a lot of the data, like his message in the morning often will have an update on how yesterday's sales went at one of his companies. So it'll say like, you know, this many people showed up, this was the average bag size, the average order size. This is how you did versus last year the same time period. So having that in mind, what do you suggest is my next step? So you want me to put this right? Option A.

Teemu Lahdenpera - 32:22

Yeah, I would do option A for now. Yeah. And then for this automation for the Telegram bot, I would just deploy to Railway. It's going to be the simplest way because here it's saying to use a cron job on Android server, but that's going to be a lot more complicated for you to set up.

Tiffanie Rothwell - 32:43

Thank you for simplifying. I'm so happy that you're simplifying it. So I go to Railway and I know we only have 10 minutes together, so I want to be super intentional. Railway is just like this,.

Teemu Lahdenpera - 32:58

Like with AI A, A, I, L.

Tiffanie Rothwell - 33:07

Oh, Railway.

Tiffanie Rothwell - 33:07

Yeah, that makes sense.

 Teemu Lahdenpera - 33:09

Like this. And then railway.com. Yeah. And we can also quickly deploy something from here. It's very quick. So if you just hit Deploy and then GitHub repo. Yeah. And then you just log in with your GitHub account. Yeah. And then you just agree to the terms of service. And then you can do GitHub repo again and then click the configure GitHub up. Yep. And then. Yep.

 Tiffanie Rothwell - 34:15

Oops. Where did it go? Mike?

 Teemu Lahdenpera - 34:23

Well, we can do it again. You can just click.

 Tiffanie Rothwell - 34:26

Actually, no.

 Teemu Lahdenpera - 34:27

Is it in a pop up?

 Tiffanie Rothwell - 34:32

Yes.

Tiffanie Rothwell - 34:33

Good, There we go. Okay,.

Tiffanie Rothwell - 34:39

So what do I do there?

Teemu Lahdenpera - 34:42

Hit create a new project.

Tiffanie Rothwell - 34:44

Like here.

Teemu Lahdenpera - 34:45

Yeah. And then GitHub repo again. Yeah. And then you can then pick something like this and then deploy it. Although like with these. Are any of them like something like super simple?

Tiffanie Rothwell - 35:00

No, like that.

Teemu Lahdenpera - 35:01

Don't require anything like on the back end Setup, like, is one of them just a HTML page? Like something like very simple, like just a dashboard. Like a HTML dashboard.

Tiffanie Rothwell - 35:15

I mean, all of them, technically, that's where they're at. There have been no connections done yet.

Teemu Lahdenpera - 35:22

Okay, well then it should be fine.

Tiffanie Rothwell - 35:25

Yeah,.

Tiffanie Rothwell - 35:28

It's just a very big, like it's a very big. But it's all HTML. Nothing. See, this is, this whole thing is just design HTML. Nothing has been set up. Not even the calendar has been set up.

Teemu Lahdenpera - 35:44

Okay, so there's no kind of like back end database or anything?

Tiffanie Rothwell - 35:47

Not yet.

Tiffanie Rothwell - 35:48

That's what I'm hoping to build towards with you.

Tiffanie Rothwell - 35:52

Yeah.

Teemu Lahdenpera - 35:53

Yeah. Okay, that's good because then in that case we can just have it deployed online and then you can send the link to anybody and they can access it.

Tiffanie Rothwell - 36:01

Cool.

Tiffanie Rothwell - 36:06

And would you recommend, like, do I have to have a. Like, should I buy a site, a domain for this or it can live on GitHub for now and live inside here.

Teemu Lahdenpera - 36:20

You can make a custom domain and then connect it, or you can buy one, but then you can also just use the Railway domain. Like Railway has their own free domains you can use.

Tiffanie Rothwell - 36:29

Oh, cool.

 Teemu Lahdenpera - 36:30

So if you click this box now.

 Tiffanie Rothwell - 36:32

Yeah.

 Teemu Lahdenpera - 36:33

And then if you go to Settings.

 Tiffanie Rothwell - 36:36

Settings. Yep.

 Teemu Lahdenpera - 36:38

And then scroll down to Networking and there's Generate domain. Once you click, it's a bit higher. Sorry.

 Tiffanie Rothwell - 36:45

I think Networking.

Teemu Lahdenpera - 36:49

So when you click Generate domain, it's gonna be online and anybody can access.

Tiffanie Rothwell - 36:53

It then I kind of don't want anyone to see it or access it. Do I need to have it live right now or can it not? I guess. What are the advantages of.

Tiffanie Rothwell - 37:06

Yeah,.

Teemu Lahdenpera - 37:09

Well, if you want to have the dashboard accessible to people like let's say in your company, then you need to have it obviously hosted. But for now I guess you don't have to.

Tiffanie Rothwell - 37:20

Okay, great. Okay, great. Yeah.

Teemu Lahdenpera - 37:22

But once you just hit Generate domain and then it's going to be live.

Tiffanie Rothwell - 37:28

But I don't really want that unless you say it's necessary for connecting things on the back end. But I don't really want it to be live unless it's necessary.

Teemu Lahdenpera - 37:40

Right, but this dashboard will be something that many people access, right?

Tiffanie Rothwell - 37:45

Eventually. And then I want to have the real domain for that. And I have to ask my boss, like, what he wants the name to be because it's to be a lot.

Tiffanie Rothwell - 37:54

Of people who have access to it.

Teemu Lahdenpera - 37:57

Yeah. So the best way to do that would then be eventually generating the domain. For now you can leave it out and then making it so that the supabase is connected. And then you also have the Supabase Auth enabled, so people can log in and then you have to give them access for them to actually log in.

Tiffanie Rothwell - 38:17

Yeah. Cool.

Tiffanie Rothwell - 38:19

So how do I do that?

Teemu Lahdenpera - 38:23

It would be something that you do through Claude code.

Tiffanie Rothwell - 38:26

Got it.

Tiffanie Rothwell - 38:28

I would just give it a command.

Teemu Lahdenpera - 38:31

Yeah.

Tiffanie Rothwell - 38:33

And what would be the command?

Teemu Lahdenpera - 38:36

You can say something like. Okay, it's actually asking it already. Like option C.

Tiffanie Rothwell - 38:43

Oh, option C.

Teemu Lahdenpera - 38:47

If you. Sorry. If you scroll down, it gave options again, all the way down. Yeah. This one. Because I guess this is the same dashboard, right? Yeah. So you can just say that I want to set up Supabase Authentic for my dashboard. And then before you send that, what kind of authentication do you want? Do you want to have just like email based one?

Tiffanie Rothwell - 39:23

Yeah, for now, just mine. Right. Is what you're like. I just. Only for me to see and to use.

Teemu Lahdenpera - 39:30

Yeah. So you can then say using Email Authentic.

Tiffanie Rothwell - 39:37

Yeah. Do I have to put my email.

Tiffanie Rothwell - 39:39

In or it already knows you'll have.

Teemu Lahdenpera - 39:43

To add it on the dashboard or like in the back end yourself. So no need to give it yet. I wouldn't give it yet because it can't really edit on its own. So now you can just send it as a prompt and then it should be good to go.

Tiffanie Rothwell - 39:58

Awesome.

Teemu Lahdenpera - 40:03

And then we can go to Supabase quickly. So I can show you how to do that part.

Tiffanie Rothwell - 40:08

Sure. Not here. Have that. Not here. I don't know where I put the other. There we go.

Tiffanie Rothwell - 40:23

So I'll just press allow once for this.

Tiffanie Rothwell - 40:26

We're always allowed.

Teemu Lahdenpera - 40:28

I would allow once.

Tiffanie Rothwell - 40:30

Got it. So, yeah.

Tiffanie Rothwell - 40:33

So now where will I go?

Tiffanie Rothwell - 40:34

Oh, you said Supabase, which was here.

Teemu Lahdenpera - 40:38

Yeah. And then on the left sidebar, it looks like I already added these tables. So you have the schemas here.

Tiffanie Rothwell - 40:45

Yeah.

Teemu Lahdenpera - 40:47

So on the left sidebar there's the option for authentication.

Tiffanie Rothwell - 40:54

Mm.

Teemu Lahdenpera - 41:01

And then here you can click Add user. Yep. And then you can send an invitation or create a new user manually. For

now, you can just create the user yourself, like hitting Create new user instead of sending an invite, but.

Tiffanie Rothwell - 41:18

Oh, got it. Yeah, yeah, totally.

Tiffanie Rothwell - 41:20

I get what you mean.

Tiffanie Rothwell - 41:21

Sorry. So there we go.

Tiffanie Rothwell - 41:25

And then the user's password.

Teemu Lahdenpera - 41:28

Yeah. So this is going to be the one that you log into the application with.

Tiffanie Rothwell - 41:33

So that's the one that it already had.

Tiffanie Rothwell - 41:36

Right. Let's use this password. Okay. Oops.

 Teemu Lahdenpera - 41:45

Yeah. We go.

 Tiffanie Rothwell - 41:49

Oh, interesting. It changes it.

 Teemu Lahdenpera - 41:52

Yeah.

 Tiffanie Rothwell - 41:55

Oops. Okay.

 Tiffanie Rothwell - 41:56

And then Create user.

 Teemu Lahdenpera - 41:58

Yep.

 Tiffanie Rothwell - 42:06

Cool.

 Teemu Lahdenpera - 42:11

All right. And that's creating a login page. And Then it's going to protect the path so that only people who are logged in can access it and nobody else should be able to access it because you're the only user currently.

 Tiffanie Rothwell - 42:23

Great.

 Tiffanie Rothwell - 42:24

Okay, so if were to summarize what we did today in like as if I'm like 12 years old, what did we do today? I feel like it was a lot. Probably sounds silly to you that I think it's a lot, but it. What did we. We created the Supabase database essentially of all of Littletree.

 Tiffanie Rothwell - 42:48

Right.

 Tiffanie Rothwell - 42:49

And ours is.

 Teemu Lahdenpera - 42:51

Yeah. Quick summary. We created a Supabase cloud account. We made a project, we made the table schemas, we connected the Supabase mcp and then we deployed the application to railway the dashboard. But it's not fully live yet because it doesn't have that domain.

Tiffanie Rothwell - 43:10

Okay. Yeah, yeah.

Tiffanie Rothwell - 43:12

And what will be my next step with Andre tomorrow when I meet with him for lunch?

Tiffanie Rothwell - 43:20

Now that we've done this well, it.

Teemu Lahdenpera - 43:22

Would be determining if the cloud is fine or the self hosted is the one that you have to go with. And then from there it's finishing up the setup for the Supabase off so that you can have it password protected. Once you've fully set up the auth, that's when you can deploy it to a domain and it's going to be safe. Even though you don't have the full domain decided yet, you can still have it deployed so that people can access it and start playing around with it. And then I guess, yeah, the telegram one is another thing to do, but that's kind of separate from this.

Tiffanie Rothwell - 43:55

That'll be like my next. After I do the Auth, then I'll do the telegram. So I can technically do that today and tomorrow.

Tiffanie Rothwell - 44:01

Right.

Tiffanie Rothwell - 44:01

I could have Telegram up and running. Do you think, by tomorrow?

Teemu Lahdenpera - 44:07

Potentially, like when I set it up myself, like it took me about 25 minutes in total to set up this.

Tiffanie Rothwell - 44:14

It would take me 20 days if it took you 20 minutes. No, I'm just joking.

Tiffanie Rothwell - 44:19

I'll figure it out.

Teemu Lahdenpera - 44:20

But just like a heads up that. Yeah, and we can also go through it together, then on the next call.

Tiffanie Rothwell - 44:25

I would really prefer that. Yeah, I'll see you. I don't. I really want to respect your time and I know our 45 minutes are up, but I'll see you tomorrow if your schedule permits, or the day after. Thank you so much again. I really appreciate you.

Teemu Lahdenpera - 44:37

All right, thank you. I appreciate it. Have a nice day.

Tiffanie Rothwell - 44:39

Thanks.

Teemu Lahdenpera - 44:40

Thanks.

Tiffanie Rothwell - 44:41

Bye.

Teemu Lahdenpera - 44:41

Bye.
