

Progress Report

Week of July 13th – July 17th · Report by Progress Pat

REPORTING ON

Progress with AIOS | MJM Command Center

Friday, July 17, 2026

Hi team! Pat here 🦾 This is **your** command center: your design, your vision, your companies. Here is where the mission stands and what moved this week.

THE MISSION

5%

COMPLETE · AND CLIMBING

100% of the company knowledge, **extracted**

WE ARE HERE

25

50

75

100%

WHERE WE ARE

The six org charts are **mostly complete**, just missing some reporting detail. Every rocket spends its first moments on the launchpad 🚀

WHEN WE REACH 100%

We build the **full plan and timeline for AIOS completion**. That is when this really takes off.

6

COMPANY ORG CHARTS DRAFTED

THE PROOF

● LIVE NOW

Filter Phil, your AI inbox guard

Phil watches an inbox and pings a private Telegram **only when an email truly needs a human**: a real person, money, a deadline, a signature. He learns who you actually deal with, ignores newsletters, calendar noise and FYI-only threads, and if he ever misfires you reply NO and he learns it forever. The email itself rides right inside the alert →

Learns your world

Zero-noise

Teachable

01

Watches

Every new email, quietly in the background

02

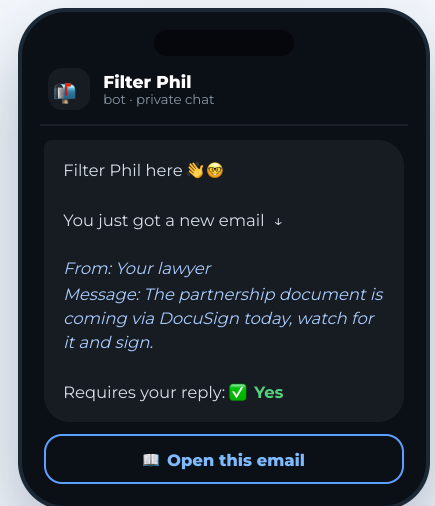

Judges

Real person? Money? A deadline?

03

Pings you

Only what matters, to Telegram

A real Phil alert (sample)

Data extraction, on video

A walkthrough of how company knowledge gets captured into the system.

mjmdashboard.org/datavideo

Angie (CEO) reviewed the system

Walked her through a **live demo** of the data extraction and the direction.

[Transcript \(PDF\)](#) · [Fireflies summary](#)

Employee form, EN + FR

Captures each person's role and **how best to support them** — curiosity and support, never "replace." Angie can edit it.

forms.gle/LzWJyqku2pX1n3XKA

Andre is on board

Tiffanie showed him AIOS. He's **happy to help** with the transition.

Click any company to open its live org chart, all built straight from the data collected so far — and **the full charts are on the next six pages** of this report. **Heads up:** the live pages aren't mobile-friendly yet, so on a phone the pages in here give a cleaner view.

ON THE HORIZON

SHIPPING NEXT

DELIVERED NEXT WEEK

A voice-agent engine for Little Tree

A full **voice agent solution proposal** is underway and lands next week. It's built to be a **key marketing engine for Little Tree**, and once it proves itself, we roll it out across the other companies. It comes with a **custom CRM** that plugs straight into AIOS.

Voice agent

Custom CRM

Plugs into AIOS

Marketing engine

HIT SOME ROADBLOCKS ON THE WAY

Phil opens the inbox, not the exact email, yet

Testing workarounds now; **we'll have it solid before Mike's account is connected.**

Tuning Phil's judgment

A few hours of trial and error so he skips cc-only threads, repetitive reports, and anything a stakeholder wouldn't care about. **10/10 now.**

NEXT WEEK

1 Meet with Amy

2 Keep building bots & automations

3 Angie's feedback on the form

4 Angie sends it & we start collecting

This is **your system**, and it's growing every single week.

Questions about anything in here? Just ask me in the group, I keep the receipts 🙄

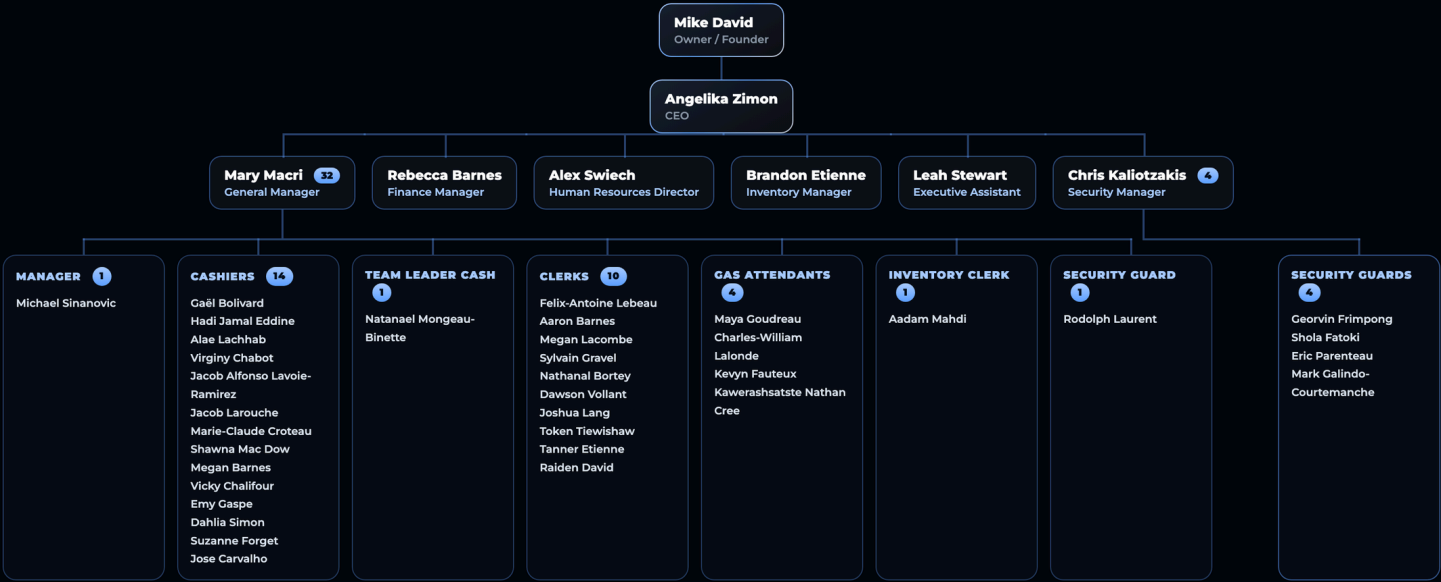

See you next Friday! 🗨️ Progress Pat

MJM COMMAND CENTER • CONFIDENTIAL

PROGRESS PAT • PAGE 2 OF 9

Little Tree • Org Chart

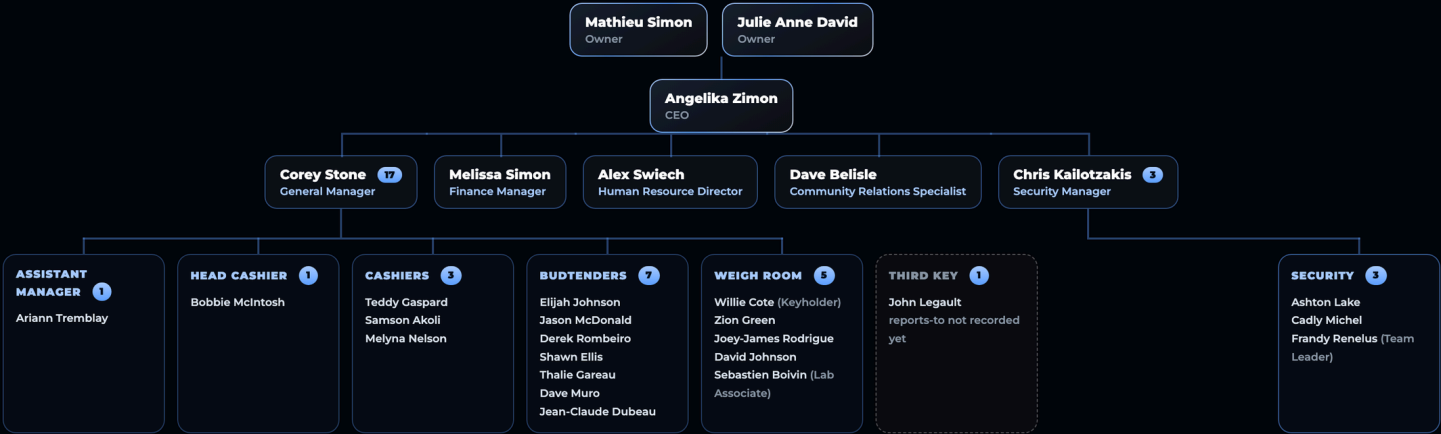

Built from the reporting data our team entered in the builder — **who reports to whom**, exactly as recorded. People and reporting lines only; systems and bots are left out for now.

Read straight from the data: all 44 people on one org line, boxed by the role written on their card. Every box on Mary's rail reports to **Mary Macri • General Manager**; the Security Guards box reports to **Chris Kaliotzakis • Security Manager**. Two details worth knowing — **Jose Carvalho** is recorded with the role "Cashier", so he appears with the cashiers; and **Rodolph Laurent** is recorded as reporting to the General Manager, so his box hangs under Mary while the other four guards hang under Chris. If either should change, it's a one-field edit in the builder.

The Medicine Box • Org Chart

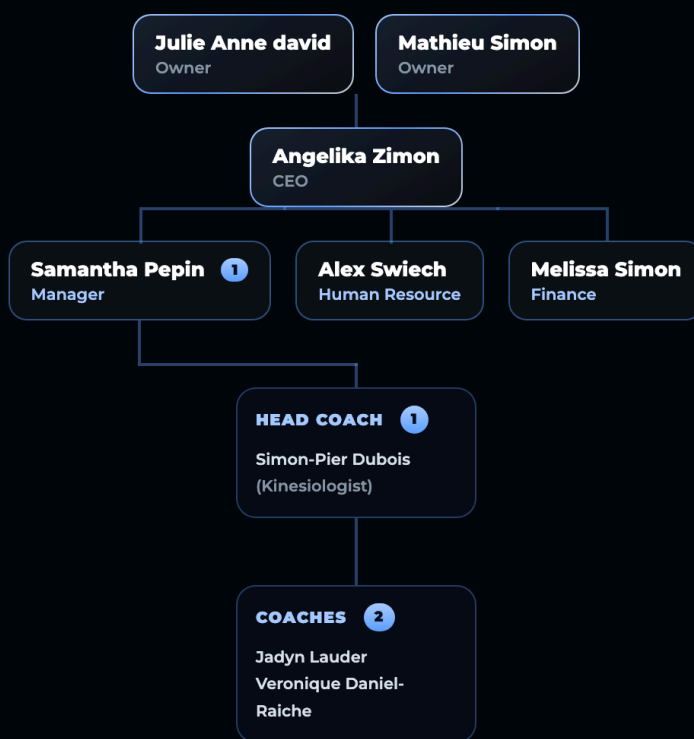

Built from the reporting data our team entered in the builder — **who reports to whom**, exactly as recorded. People and reporting lines only; systems and bots are left out for now.

Read straight from the data: all 29 people on one org line, boxed by the role written on their card. Every box on Corey's rail reports to **Corey Stone • General Manager**; the Security box reports to **Chris Kallotzaklis • Security Manager**. Two details worth knowing — **Dave Belisle** is recorded as reporting to the **CEO**, so he sits on the leadership line; and **John Legault (Third Key)** has no reports-to recorded, so his box is dashed and unconnected until that field is filled in the builder.

Kanehsatake Community Fitness • Org Chart

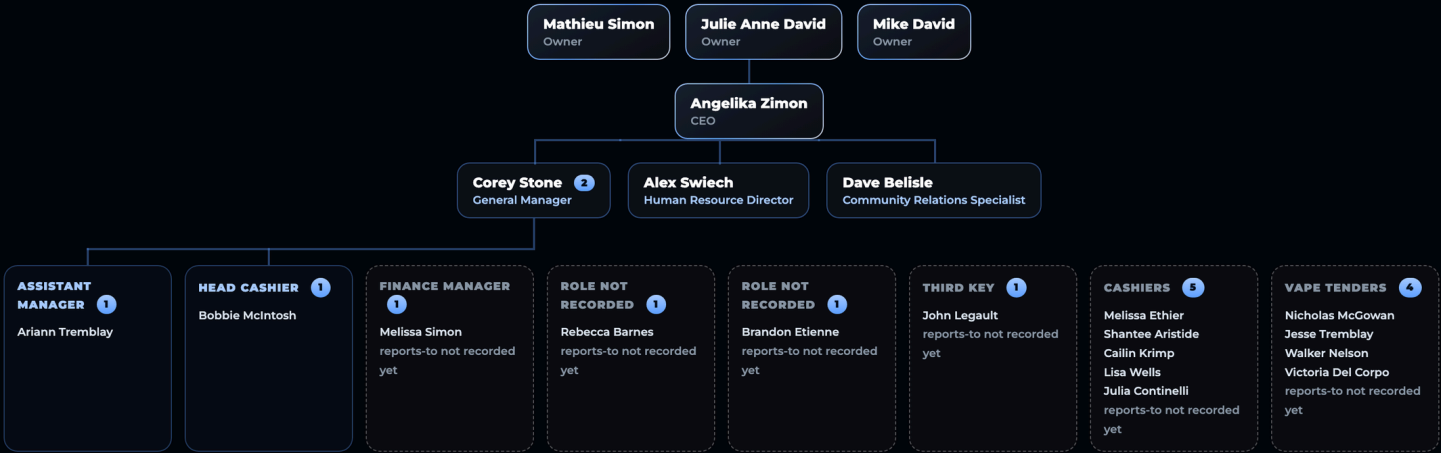

Built from the reporting data our team entered in the builder — **who reports to whom**, exactly as recorded. People and reporting lines only; systems and bots are left out for now.

Read straight from the data: all 9 people, fully connected — this chart has a real coaching chain: **Simon-Pier Dubois** (Head Coach / Kinesiologist) reports to **Samantha Pepin • Manager**, and both coaches report to the Head Coach. Every reports-to field was filled in, so nothing on this chart is guessed.

Leroi Tobacco Vape · Org Chart

Built from the reporting data our team entered in the builder — **who reports to whom**, exactly as recorded. People and reporting lines only; systems and bots are left out for now.

Read straight from the data: all 22 people. Solid boxes are connected exactly as recorded — **Ariann Tremblay** and **Bobbie McIntosh** report to **Corey Stone · General Manager**, and **Dave Belisle** reports to the **CEO**, so he sits on the leadership line. The dashed boxes are **13 people with no reports-to recorded yet** (and Rebecca Barnes and Brandon Etienne are missing a role too) — once those fields are filled in the builder, they connect to the chart.

The Box Cafe • Org Chart

Built from the reporting data our team entered in the builder — **who reports to whom**, exactly as recorded. People and reporting lines only; systems and bots are left out for now.

BARISTA 1 Hanna Barnes reports to “Cafe Manager” — no one holds that title yet	PREP COOK 1 Tasha reports-to not recorded yet	BAKER / STUDENT 1 Jade Ladouceur reports-to not recorded yet	KITCHEN SUPPORT 1 Eden Lemieux reports-to not recorded yet
---	--	---	---

Read straight from the data: all 10 people. The leadership line is connected exactly as recorded — Alex, Farah and Cristina all report to **Angelika Zimon • CEO**. All four staff boxes are dashed: **Hanna Barnes** is recorded as reporting to a “Cafe Manager”, a title no one holds in this chart, and **Tasha, Jade and Eden** have no reports-to recorded at all. Fill those fields in the builder and they connect.

Moccasin Joe Coffee Roasters • Org Chart

Built from the reporting data our team entered in the builder — **who reports to whom**, exactly as recorded. People and reporting lines only; systems and bots are left out for now.

Read straight from the data: all 7 people. Everyone below the owners is recorded as reporting straight to **Angelika Zimon • CEO** — there are no other managers entered for this company yet. One gap: **Annycia Purich** has no role recorded, only that she reports to the CEO.

Systems & Access Handoff

MJM VENTURES · IT ONBOARDING

MEETING AGENDA

Tiffanie x Amy

Next week · 30 min · requested by Mike

◎ PURPOSE

Get Tiffanie fully set up on the systems side of the portfolio so AIOS can keep being built without access bottlenecks: a **map of what we run, the access to build on it, and the key accounts secured**. The aim is to leave with everything in one sitting.

ATTENDEES

Tiffanie & Amy

SCOPE

Whole portfolio

AGENDA · WHAT WE'LL WALK THROUGH

5 ITEMS

- 1 Systems inventory** MOST VALUABLE TO BRING
 A list of the tools & platforms in use across the portfolio. For each: **what it is · which company uses it · what it's for · who administers it**. Even a rough version is the one thing that's hardest to build without you.
- 2 Logins & access**
 Admin or delegated access to the systems that plug into AIOS, especially: **Google Workspace** (accounts, groups, drives, calendars) · **domain registrars & DNS** · **email & messaging** (newsletters, transactional email, SMS like Avocado) · **scheduling & media** (Calendly, Zoom, Loom, Fireflies) · the IT side of **accounting / point-of-sale**.
- 3 APIs & integrations**
 Any API keys, developer accounts, or integrations already set up anywhere (Google Cloud, Meta, payment platforms, anything with a webhook). Knowing what exists means **we don't rebuild or pay twice** for something we already have.
- 4 Billing & ownership**
 Which account or card each subscription sits on, who owns it, and roughly when it renews, **so nothing lapses or stays tied to one person**. (No card numbers needed, that stays private.)
- 5 Recovery & 2FA**
 Flag any account whose recovery email or phone is a single person, and **fix it together while we're here**. We've already been bitten by this once, so let's protect the important accounts properly.

COME PREPARED WITH

- A rough **list of system names** (even sent ahead helps)
- Ready to sign into the **admin consoles** together
- Who holds **billing / ownership** for each
- Any **API keys or dev accounts** already in place

GROUND RULES · SECURITY

- **No passwords or keys by email**. Bring them, or we enter them live
- Everything moves through a **password manager** together
- No shared vault yet? We **set one up** in this meeting

WE LEAVE WITH The **systems inventory**, **delegated access** to what AIOS needs, a **secured recovery list** for the key accounts, and a **shared password vault** started for the portfolio.
